Tremp

Tremp/Chain of shoe shops/Lisbon, Zagabria, Athens, New York/2006

The project for the chain of shoe shops TREMP is based on the mood and use of natural materials and is composed in a simple and modular way. The shops are defined by a shell of wall panels, like a contemporary “boiserie” made of natural beech wood boards, each of these element pivoting on itself creating the shelving and hanging system increasable without limits of length.

Included in the project was created exclusively for TREMP a seat designed for trying shoes on, two adjoined elements upholstered in soft fabric hide a mechanism that allow the movement of the back stool making the seat usable on the two opposite sides.

The floor in dark wood, the scattered informal lighting system, the aluminium and stainless steel details complete the Nordic relaxed and natural mood that portrays and emphasizes the product.
